PLASTIMAK

Tekne, Merdiven Küpeşte Otomatik Kapı Profilleri

Boat and Stair Banister Automatic Door Profiles

Üretilecek ürünler için kullanılacağı yeri bilmek çok önemlidir. Yüksek mukavemet isteyen yerler için yumuşak ürünler üretmek, bu ürünün kullanılacağı yere saygısızlık olur. Nitekim tekne, yat, merdiven gibi yüksek yüklere maruz kalan yerler için yapmış olduğumuz özel üretimlerde bulunmaktadır. Küpeşte olarak nitelendirdiğimiz bu ürünlerimiz, üzerine uygulanan yükü absorbe edip kullanıldığı yere zararı sifıra indirmek için tasarlanmıştır. Aynı yapıya sahip otomatik kapı profillerimizde bu amaç için üretilmektedir. Devamlı açılıp kapanan bir alanda kullanacağınız profilde ona göre dayanıklı olmalıdır.

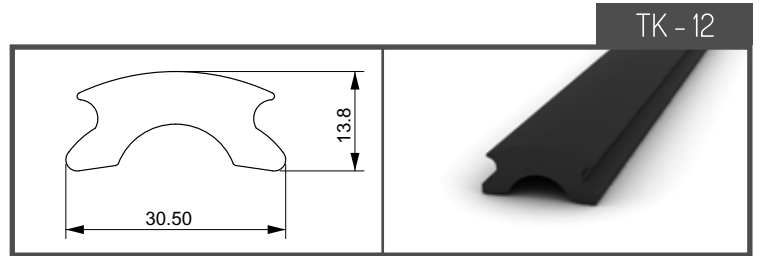

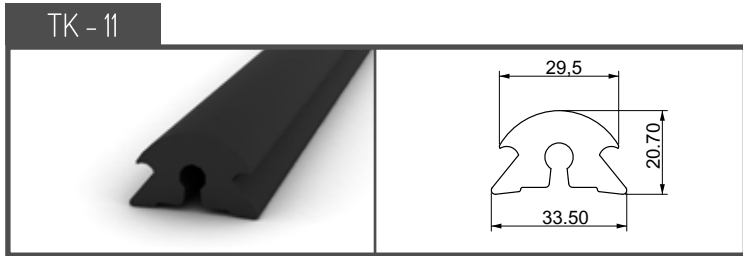

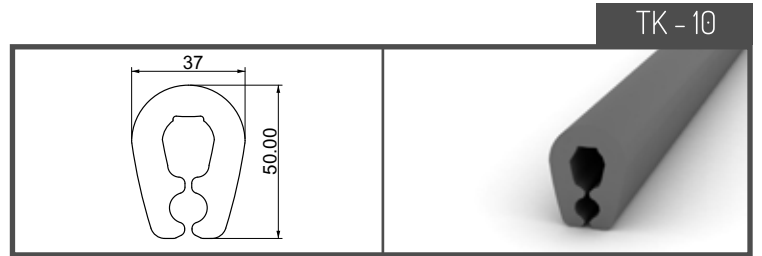

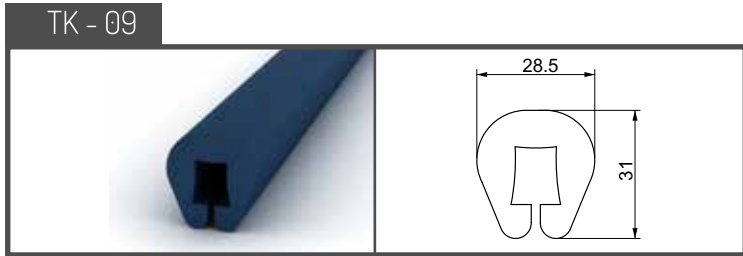

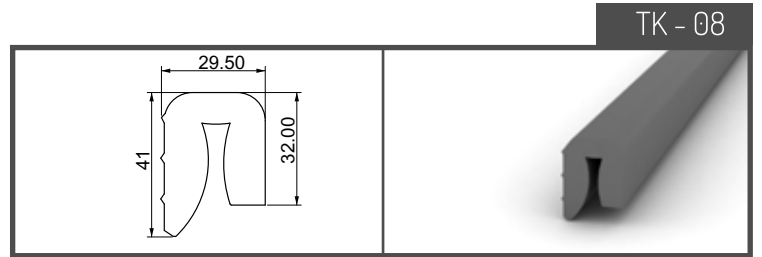

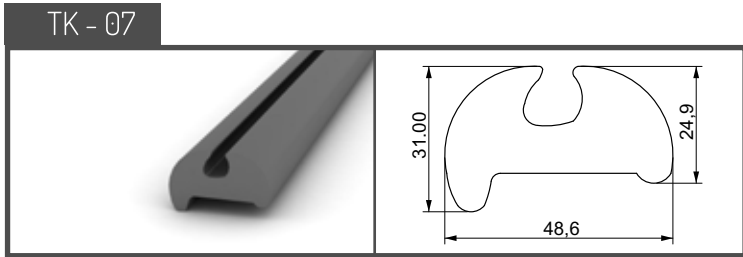

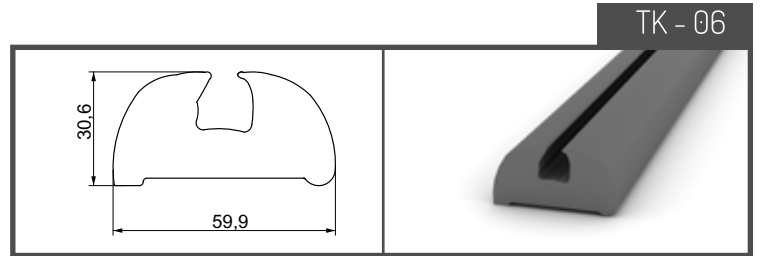

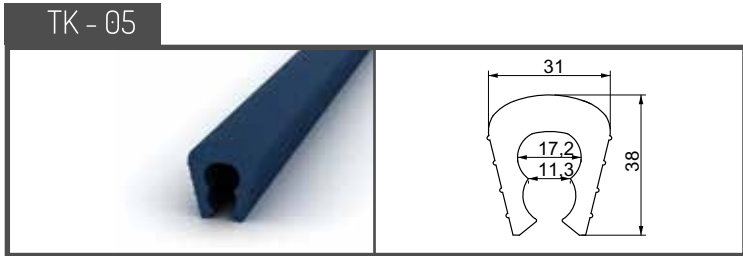

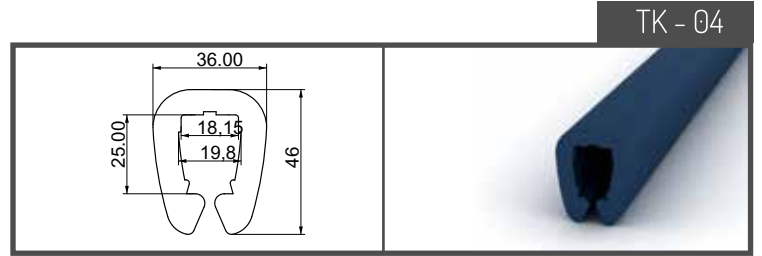

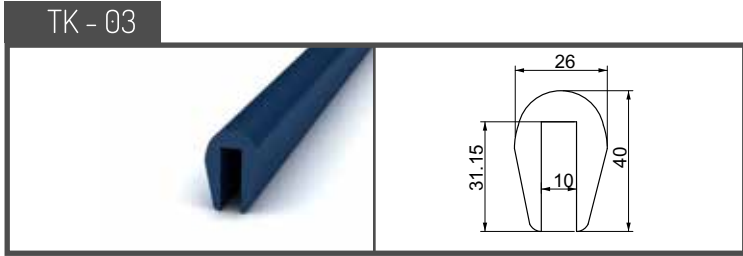

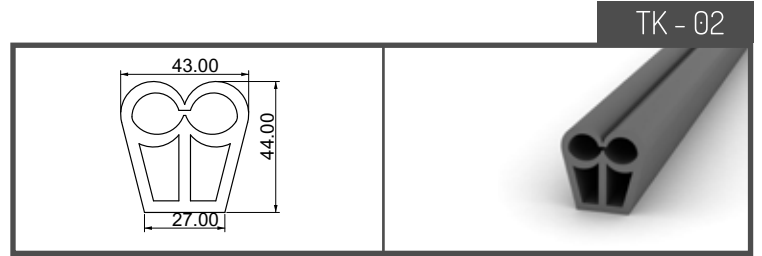

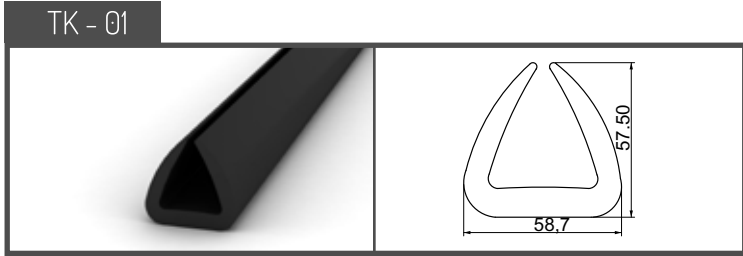

Bu hassasiyetle ürettiğimiz ve kendi kataloğunu oluşturan profillerin içerisinde bizim için önemi yüksek bir grup daha var. Otomotiv profilleri. Hem bizim hem de müşterimiz için ne kadar hassas olabileceğini bir düşünün. Üretimde o şekilde. Yüksek darbe dayanımını, esneme özelliğini, birleştirici yapısını içinde barındıran bir plastik profil hayal edin. Çünkü biz tasarımdaki ve üretimde ki başarımızı hayal ederek gerçekleştiriyoruz.

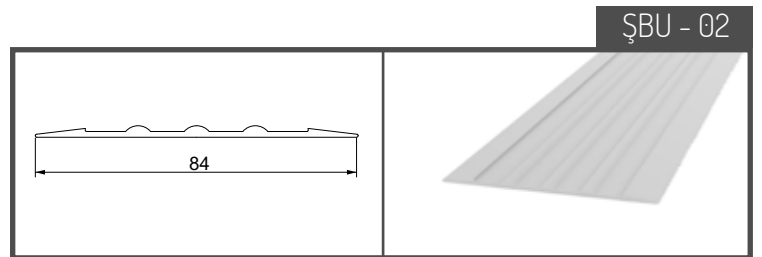

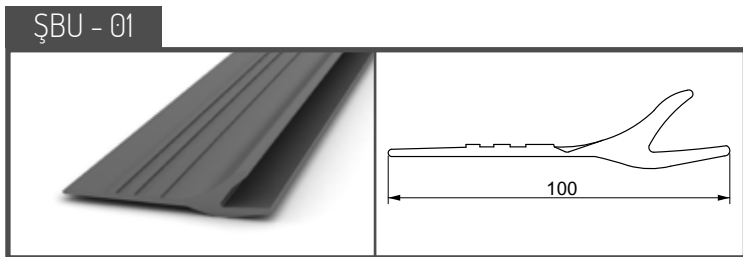

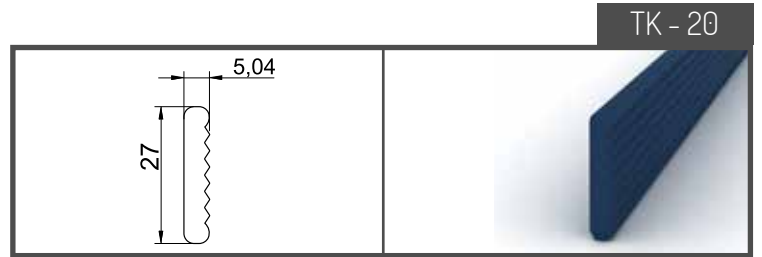

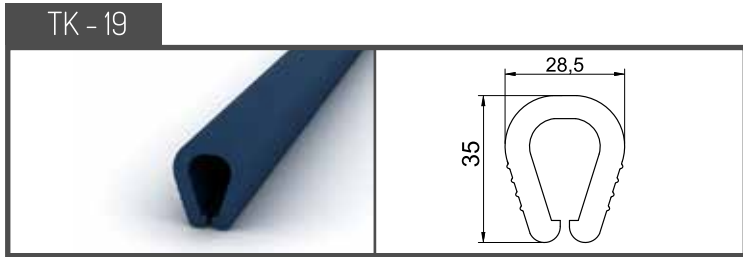

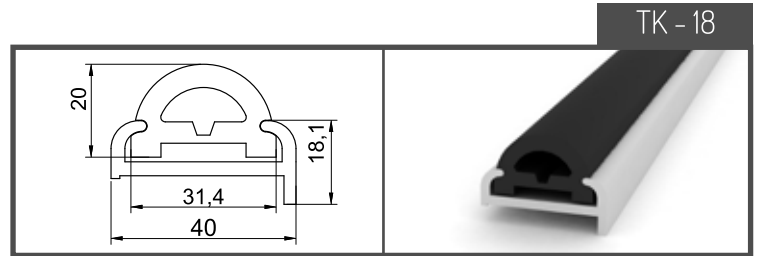

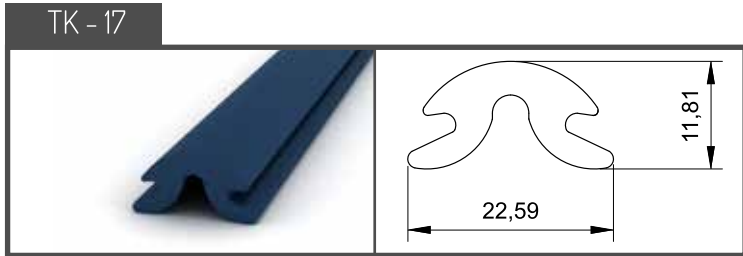

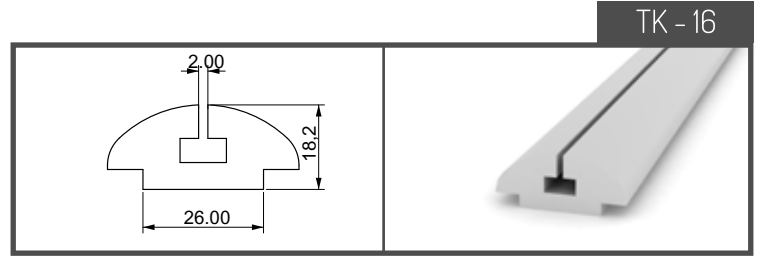

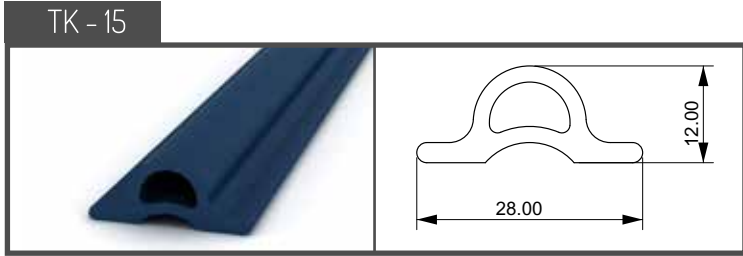

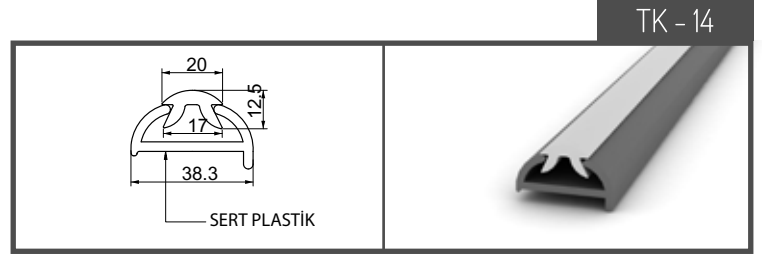

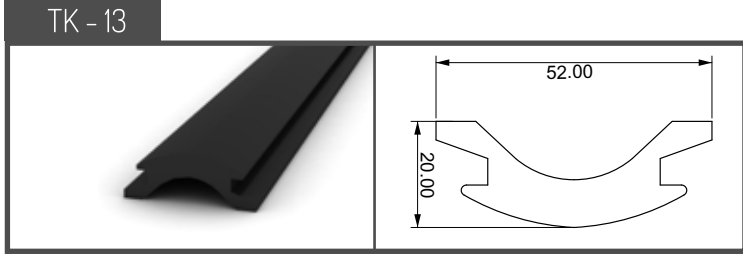

It is very important to know the places that the products to be produced will be used. Producing softer products for the places requiring high resistance would not be reasonable for the place that this product will be used. Thus, we have special productions for the places exposed to high load like boats, yachts or stairs. These products called as handrail and bumpers are designed to make zero damage to the place by absorbing the load applied on it. Our automatic door profiles having the same structure are produced for this purpose as well. A profile to be used in a place continuously opening and closing should be stable accordingly.

There is another group with high importance to us within our profiles, which we produce and form their own catalogues. They are the automotive profiles. Think how precision it can be both for us and for our customers. That is how the production is like. Imagine a plastic profile including high impact resistance, expansion property, combining structure inside because we realize our success in design and production by imagining.
